FORWARD

The following compilation of information is the eleventh edition of the Municipal Fire Equipment Survey Manual.

It was prepared using statistical information provided to the Fire Marshal's Office by the Fire Departments throughout the Province of New Brunswick. The present edition contains information up to the end of 1983 and any changes occurring after that date will be reflected in subsequent editions of the manual.

While every effort has been made to ensure the information is as accurate as possible, complete accuracy cannot be guaranteed. If any errors or omissions are discovered, it is requested that the corrected information be sent to the Fire Marshal's Office as soon as possible.

A sincere thanks is expressed to all those who have contributed toward the preparation of this manual.

M. P. Fitzpatrick
Acting Fire Marshal

85-0495/

PREFACE

La compilation de l'information suivante est la 11ième édition du Manuel décrivant les équipements à feu appartenant aux municipalités.

Il a été préparé en ce servant de l'information statistique fourni au Bureau du prévôt des incendies par les Postes de Pompiers de la Province du Nouveau-Brunswick. La présente édition contient de l'information allant jusqu'à décembre 1983 et des changements qui ont eut lieu après cette date paraîtront seulement dans des éditions subséquentes du manuel.

Malgré que tout les efforts ont été faits pour assurer que les informations contenus sont aussi exactes que possible, on ne peut assurer complètement que tel est le cas. S'il y a des erreurs ou des omissions que vous découvrez, on vous demande de faire parvenir les corrections au Bureau du prévôt des incendies le plus tôt possible.

On tient a remercier très sincèrement tout ceux qui ont contribués à la préparation de ce manuel.

M. P. Fitzpatrick
Prévôt des incendies par interim

As New Brunswick has no "Hose Thread Standardization Program", 2½" hose threads differ in various parts of the province, although areas or "zones" have similar threads to correspond to the largest centre in the area. Thus all departments in the Saint John area have the Saint John thread, Moncton the Moncton thread, etc., for further details see Hose Thread Specifications Chart. By the use of coordinated adapters a provincial hook-up could be achieved.
